

# Fusion 360 Project Report: Water Bottle Design

This project focuses on designing a 3D model of a water bottle using Autodesk Fusion 360. The aim is to understand solid modeling, sketching, extrusion, and threading operations.

## Objectives:

- To design a realistic water bottle using Fusion 360
- To learn 3D modeling tools like Extrude, Revolve, and Thread
- To understand component-based design

## Procedure:

1. Create a new design in Fusion 360.
2. Sketch a circle as the base of the bottle.
3. Use Extrude to create the bottle body.
4. Apply Fillet to smooth edges.
5. Create the neck using Extrude and add Thread.
6. Apply appearance for realistic visualization.

## Result:

A 3D model of a water bottle was successfully created with proper dimensions, smooth finish, and realistic appearance.
